## To the Learner

### To the Learner:

You have the skills you need to be a strong student in this class. Adult math learners have many skills. They have a lot of life experience. They also use math in their everyday lives. This means that adult math learners may already know some of what is being taught in this book. Use what you already know with confidence!

## How to Use This Book

This textbook has:

- A **Table of Contents** listing the units, the major topics and subtopics.
- A **Glossary** giving definitions for mathematical vocabulary used in the course.
- A **Grades Record** to keep track of your marks.

The textbook has many exercises; some are quite short, but others have a great number of questions. You do not have to do every single question!

- Do as many questions as you feel are necessary for you to be confident in your skill. It is best to do all the word problems.
- If you leave out some questions, try doing every second or every third question. Always do some questions from the end of each exercise because the questions usually get harder at the end. You might use the skipped questions for review before a test.
- If you are working on a difficult skill or concept, do half the exercise one day and finish the

exercise the next day. That is a much better way to learn.

**Self-tests** at the end of most topics have an **Aim** at the top. If you do not meet the aim, talk to your instructor, find what is causing the trouble, and do some more review before you go on.

**Mark            /18            Aim    15/18**

A **Review and Extra Practice** section is at the end of each unit. If there is an area of the unit that you need extra practice in, you can use this. Or, if you want, you can use the section for more review.

A **Practice Test** is available for each unit. You may:

- Write the practice test after you have studied the unit as a practice for the end-of-chapter test, OR
- you might want to write it before you start the unit to find what you already know and which areas you need to work on.

**Unit Tests** are written after each unit. Again, you must reach the Aim before you begin the next unit. If you do not reach the aim, the instructor will assist you in finding and practising the difficult areas. When you are ready, you can write a B test to show that you have mastered the skills.

A **Final Test** is to be written when you have finished the book. This final test will assess your skills from the whole book. You have mastered the skills in each unit and then kept using many of them throughout the course. The test reviews all those skills.

## **Grades Record – Book 1**

You have also been given a sheet to write down your grades. After each test, you can write in the mark. This way you can keep track of your grades as you go through the course. This is a good idea to use in all your courses.

**Grade Record – Book 1**

## Unit 1: Number Sense

---

## Topic A: Emotions and Learning

Emotions, or what we feel about something, play a big part in how we learn. If we are calm, we learn well. If we are afraid or stressed, we do not learn as well. Many people are afraid of math. They fear making a mistake. “Math anxiety” is the fear of math.

People who suffer from math anxiety may get headaches, sick stomachs, cold hands, or they may just sweat a lot or just feel scared.

### Do You Suffer from Math Anxiety?

Read the list below and put a check mark beside the ones you feel.

- Are your palms moist?
- Is your stomach fluttering?
- Do you feel like you can’t think clearly?
- Do you feel like you would rather do anything else than learn math?
- Are you breathing faster than normal?
- Is your heart pounding?
- Do you feel cold?

Add any other feelings.

### Math Anxiety

“Math anxiety,” or the fear of math, is a learned habit. If it is learned, it can be unlearned. Most math anxiety comes from bad memories while learning math. It may be from doing badly on a test or asking a question then being made fun of. These bad memories can make learning math hard.

Everyone can learn math. There is no special talent for math. There are some people who are better at math than others, but even these people had to learn to be good at math.

#### How to Deal with Math Anxiety

Anyone can feel anxiety that will slow down learning. The key to learning is to be the “boss” of your anxiety.

One way to be the “boss” is to relax. Try this breaking exercise.

Start by breathing slowly to the count of four. It may help to close your eyes and count. Now hold your breath for four counts and then let your breath out slowly to the count of four. The counting is silent and should follow this pattern:

“Breathe in, two, three, four. Hold, two, three, four. Breathe out, two, three, four. Wait, two, three, four.”

With practice, the number of counts can be increased. This is an easy and good way to relax.

Now, try this exercise quietly and repeat it five times slowly.

---

## Topic B: Counting

To learn to read, you first need to learn the letters of the alphabet. Once you know the alphabet, you put the letters together to make words, then sentences, then paragraphs and then stories.

Those letters become the “tools” used to write everything.

The same is true for math. In math we use digits. The digits are:

0 1 2 3 4 5 6 7 8 9

Digits are named after our fingers. Our fingers are also called digits. The mathematics term comes from the days of counting on our fingers. We have ten fingers and there are ten digits. We use the letters of the alphabet to make up words, and we use digits to make up numbers. There are two ways to write numbers. You can write them as numerals. You can write them using word names.

**Two Ways to Write Numbers**

| <b>Numeral</b> | <b>Word Name</b> |
|----------------|------------------|
| 0              | zero             |
| 1              | one              |
| 2              | two              |
| 3              | three            |
| 4              | four             |
| 5              | five             |
| 6              | six              |
| 7              | seven            |
| 8              | eight            |
| 9              | nine             |

Counting is matching the number name to the things being counted. You see a bowl of apples on the table. You want to know how many apples are in the bowl. You answer that question by saying, “There are one, two, three, four apples.” You are giving the number names “one”, “two”, “three,” and “four” to the apples. The last number you say is the total number of apples.

### Exercise 1

Count the number of shapes in each picture. Then write the numeral and the word name. Check your work using the answer key at the end of the exercise.

#### Emotions Check

How are you feeling?

- Are your palms moist?
- How is your breathing?

Take control. Be the boss. If you are feeling anxious, practice your breathing exercise.

Remember: Breathe in slowly to the count of four. Hold it for the count of four.

## Topic C: Place Value

As you know, we count much higher than ten in our world. Each place in a number has a value.

The ones place tells how many ones there are.

- 3 means 3 ones.
- 0 means 0 ones
- 9 means 9 ones

□□□

9 is the largest amount that we can express (write or say) with one digit.

□□□□  
□□□□□

The tens place shows how many tens there are. The ones place must have a digit in it before there can be a digit in the tens place.

Every ten is ten ones.

43 means 4 tens and 3 ones.

20 means 2 tens and 0 ones. The zero holds the ones place.

99 means 9 tens and 9 ones. 99 is the largest amount that we can express (write or say) using only two digits.

### Exercise 1

Fill in the blanks to make each sentence true. Draw a picture for questions c, f, h, and j like the examples. Check your work using the answer key at the end of the exercise. Ask your instructor to check your sketches.

#### Example

49 means 4 tens and 9 ones.

- 37 means \_\_\_\_ tens and \_\_\_\_ ones.
- 65 means \_\_\_\_ tens and \_\_\_\_ ones.
- 56 means \_\_\_\_ tens and \_\_\_\_ ones.
- 87 means \_\_\_\_ tens and \_\_\_\_ ones.
- 33 means \_\_\_\_ tens and \_\_\_\_ ones.
- 60 means \_\_\_\_ tens and \_\_\_\_ ones.

### Answers to Exercise 1

- a. 3 tens, 7 ones
- b. 6 tens, 5 ones
- c. 5 tens, 6 ones
- d. 8 tens, 7 ones
- e. 3 tens, 3 ones
- f. 6 tens, 0 ones

The place to the left of the tens place is the **hundreds place**. It shows how many hundreds there are. A number written using three whole digits has a hundreds place, a tens place, and a ones place.

Every hundred is the same as ten tens, and every hundred is the same as one hundred ones.

Every hundred is ten tens – every hundred is the same as one hundred ones.

100

100

100

425 means 4 hundreds, 2 tens, and 5 ones

354 means 3 hundreds, 5 tens, and 4 ones

## Exercise 2

**Emotions Check**

How are you feeling?

1. Are your palms moist?
2. How is your breathing?

Take control. Be the boss. If you are feeling anxious, practice your breathing exercise.

Remember: Breathe in slowly to the count of four, hold it for the count of four.

**Reading and Writing Numerals**

You know that the **digits** are 0 1 2 3 4 5 6 7 8 9 and that digits are arranged in different places so we can count larger amounts than our ten fingers!

When we use **digits**, we call what we write the **numeral**.

- 328 is a numeral
- 46 is a numeral
- 3 is a numeral

We use numerals to represent **numbers**.

If we think about language instead of mathematics it will be clearer.

**Letters** are used to make **words**. We respond to the **meaning** of words.

- Digits are the “letters” of math.
- Numerals are the “words” of math.
- Numbers are the “meaning” of math.

Now you know the place value of digits up to three places. Next you will learn to read and write numerals and number words. Some of the words to read and spell may be new to you.

The numerals from 1 to 12 have special words. These are:

### Numerals 1 to 12

| Numeral | Word Name |
|---------|-----------|
| 0       | zero      |
| 1       | one       |
| 2       | two       |
| 3       | three     |
| 4       | four      |
| 5       | five      |
| 6       | six       |
| 7       | seven     |
| 8       | eight     |
| 9       | nine      |
| 10      | ten       |
| 11      | eleven    |
| 12      | twelve    |

The number names for numerals from 13 to 19 are made up of two parts. The first part tells us **how many units**. The second part (“teen”) tells us there is also **1 ten**.

### Numerals 13 to 19

| Numeral | Word Name | Meaning               |
|---------|-----------|-----------------------|
| 13      | thirteen  | three units and 1 ten |
| 14      | fourteen  | four units and 1 ten  |
| 15      | fifteen   | five units and 1 ten  |
| 16      | sixteen   | six units and 1 ten   |
| 17      | seventeen | seven units and 1 ten |
| 18      | eighteen  | eight units and 1 ten |
| 19      | nineteen  | nine units and 1 ten  |

## Exercise 6

Write the word name for each number. Try not to look at the list. Check your work using the answer key at the end of the exercise.

- |       |       |
|-------|-------|
| a. 6  | d. 14 |
| b. 17 | e. 12 |
| c. 4  | f. 13 |

**Answers to Exercise 6**

- |              |             |
|--------------|-------------|
| a. six       | d. fourteen |
| b. seventeen | e. twelve   |
| c. four      | f. thirteen |

The word names for the numbers 20 to 90 are also made up of two parts. The first part tells us **how many groups of tens**. The second part (“ty”) tells us we are counting **groups of tens** and not something else. The “-ty” may have come from a shortening of the word “ten”.

**Numerals 20 to 90**

| Number | Word Name | Meaning    |
|--------|-----------|------------|
| 20     | twenty    | two tens   |
| 30     | thirty    | three tens |
| 40     | forty     | four tens  |
| 50     | fifty     | five tens  |
| 60     | sixty     | six tens   |
| 70     | seventy   | seven tens |
| 80     | eighty    | eight tens |
| 90     | ninety    | nine tens  |

The names for the numbers **between** groups of tens also follow a pattern. The first number tells us how many tens. The second number tells us how many ones.

### Numerals Between Tens

| Tens Ones       | Tens Ones       | Tens Ones      |
|-----------------|-----------------|----------------|
| 20 twenty       | 30 thirty       | 40 forty       |
| 21 twenty-one   | 31 thirty-one   | 41 forty-one   |
| 22 twenty-two   | 32 thirty-two   | 42 forty-two   |
| 23 twenty-three | 33 thirty-three | 43 forty-three |
| 24 twenty-four  | 34 thirty-four  | 44 forty-four  |
| 25 twenty-five  | 35 thirty-five  | 45 forty-five  |
| 26 twenty-six   | 36 thirty-six   | 46 forty-six   |
| 27 twenty-seven | 37 thirty-seven | 47 forty-seven |
| 28 twenty-eight | 38 thirty-eight | 48 forty-eight |
| 29 twenty-nine  | 39 thirty-nine  | 49 forty-nine  |

The written names for numbers that have tens and ones are written with a hyphen (-) between them. This pattern with the hyphen continues up to ninety-nine (99).

#### Exercise 7

Write the word names for these numbers. Check your work using the answer key at the end of the exercise.

When we write hundreds in words, we need two words. The first word tells us how many hundreds. The second word tells us we are counting hundreds.

200    two hundred

You now know how to write numbers in words up to 999.

## Remember

- hyphen (-) between the tens and units
- no hyphen anywhere else
- no “s” on the hundred
- no “and” between the hundreds place and the tens place

## Topic D: Ordering Numerals

We arrange **numerals** in order from smallest to largest. Sorting numbered papers such as order forms, arranging items by the date and comparing prices are some of the ways you use this skill.

Look at two numerals and tell which one is larger. How do you do this?

### Exercise 1

Draw a line under the larger numeral in each pair.

a. 43, 48

c. 64, 63

e. 92, 89

b. 27, 21

d. 24, 35

f. 72, 81

### Answers to Exercise 1

b. 27

d. 35

f. 81

c. 64

e. 92

To compare numerals, look at the place with the largest value.

### Example A: Compare 63 and 59

Look at the tens place.

- 63 has a 6 in the tens place
- 59 has a 5 in the tens place.
- 63 is larger than 59.

### Example B: Compare 496 and 476

Look at the hundreds place.

- Both have 4's.

Look at the tens place.

- 496 has a 9 in the tens place
- 476 has a 7 in the tens place.

- 496 is larger than 476.

**Note:** Numerals with one digit are always less than numerals with two digits. Numerals with two digits are always less than numerals with three digits, and so on.

- 9 is less than 15
- 87 is less than 107
- 999 is less than 1 001

### Exercise 2

Draw a line under the larger numeral in each pair. Check your work using the answer key at the end of the exercise.

Now use the same ideas to arrange more than two numerals in order. For example, to arrange **6, 616, 1, 66, 666, 61**, and **16** in order from **smallest to largest**, use the following method.

First, sort the numerals with the same number of digits into groups:

- 6, 1
- 66, 61, 16, and
- 616, 666

The group of one digit numerals contains 6 and 1. As 1 is smaller than 6, the list starts with 1, then 6.

The group of two-digit numerals contains 66, 61, and 16. Use your skills in ordering numerals to see that 16 is smallest, then 61, and 66 is the largest of this group. The list now reads, 1, 6, 16, 61, 66.

Finally, look at the three-digit numerals, 616 and 666. As 616 is smaller than 666, it will come first. The list now reads: 1, 6, 16, 61, 66, 616, 666.

#### Exercise 4

Arrange these numbers in order from smallest to largest. Check your work using the answer key at the end of the exercise.

- a. 323, 32, 332, 33, 3, 322, 2
- b. 44, 7, 474, 47, 744, 74, 77
- c. 123, 135, 152, 125
- d. 472, 427, 452, 475

#### Answers to Exercise 4

- b. 7, 44, 47, 74, 77, 474, 744
- c. 123, 125, 135, 152
- d. 427, 452, 472, 475

## Greater Than, Less Than, Equals

The sign  $<$  means “is less than” (smaller than).

The sign  $>$  means “is greater than” (bigger than).

The **greater than** and **less than** signs always point to the smaller number. That is, the point or the tip of the sign is close to the small number.

- $5 < 12$  means 5 is less than 12
- $6 > 3$  means 6 is greater than 3

The sign  $=$  means “**equals**” and is used when two amounts are the same.

### Remember

The hungry mouth goes to the biggest number.

### Exercise 5

Write  $<$ ,  $>$ , or  $=$  in each blank as needed. Check your work using the answer key at the end of the exercise.

## Topic E: Rounding Numbers

We use numbers a lot in our everyday lives. List some of the ways you use numbers.

---

---

---

You may have written money, shopping, time, and counting as part of your answer.

Think about time. Let's say it takes eight minutes to walk to the bus. If someone asks you how long it takes, you will probably say, "About ten minutes."

If you buy a sweater that cost \$29, you may say, "Oh, it was around thirty dollars."

How far is it from Vancouver to Prince George? The map says 796 km, but we would probably say, "About 800 kilometres."

You have just read examples of **rounding numbers**.

We round numbers for many reasons:

- We may not know the exact number.
- The exact number may not be important for what we are doing.
- We may need a **quick way to figure** something out.

When you are rounding numbers, use zeros to hold the places at the end of the number. Work through the following examples and exercises carefully. **Rounding is an important skill.**

### Rounding to the Nearest Ten

Here is a short method to round to the nearest ten. When rounding to the nearest ten, do this:

1. Underline the tens digit. 83
2. Look at the digit following in the ones place. 83

CONGRATULATIONS!!

Now you have finished Unit 1.

TEST TIME!

Ask your instructor for the Practice Test for this unit.

Once you've done the Practice Test,

You need to do the Unit 1 Test.

Again, ask your instructor for this.

GOOD LUCK!

## Unit 2: Addition

## Topic A: Addition

**Addition** puts amounts together. The answer of addition is called the **sum** or the **total**.

The **plus sign** + means to add.

$$\begin{array}{c} \diamond \diamond \diamond \\ 3 \end{array} + \begin{array}{c} \diamond \diamond \\ 2 \end{array} = \begin{array}{c} \diamond \diamond \diamond \diamond \diamond \\ 5 \end{array}$$

says “three plus two equals five” or “three and two is five”.

The **sum** is 5.

You can count on your fingers to get the answers to addition questions but counting takes too long.

**Addition facts** are a tool that you use to do adding questions.

### Exercise 1

Check out your **addition facts** by doing this exercise as quickly as possible without counting on your fingers. The highest **total** or **sum** (what the numbers add up to) for these number facts is 9. Check your work using the answer key at the end of the exercise. Then, make a list of any addition facts you do not know or which are slow, practice them.

Need some extra practice?

Find a partner and play the following card game. You will use a regular deck of cards

- Take out the jacks, queens and kings.
- Shuffle the cards and deal them out.
- Do not look at your cards. Leave them in a pile in front of you.
- Each player flips over a card.
- Take turns adding the numbers on the cards.
- If the person whose turn it is gets the right answer that person gets to keep the cards.
- If the person whose turn it is gets the wrong answer the other player gets the cards.
- The person who collects all the cards is the winner.
- You could also set a time limit and the person with the most cards when time is up is the winner.

## Adding Across

So far you have only been adding numbers when they are **up and down** or **vertical**.

**Example:**

$$\begin{array}{r} 4 \\ +5 \\ \hline 9 \end{array}$$

Another way to add numbers is **across** or **horizontally**.

$$4 + 5 = 9$$

In math, sometimes you will need to work from left to right.

### Exercise 13

Practice adding across or horizontally. The highest total or **sum** (what the numbers add up to) for these number facts is 20. Check your work using the answer key at the end of the exercise.

**Word Problems**

Learning addition facts is very important. Once you know them all, you can use them to solve word problems.

Word such as:

- more than
- plus
- added to
- sum
- total
- have altogether
- in all

tell you to add the numbers together.

Look for these words when reading word problems and underline them before trying to solve a problem. Circle the information that is given.

**Example:**

Before lunch Jane read 2 pages. After lunch she read 9 pages. How many pages did she read in all?

Before lunch Jane read 2 pages. After lunch she read 9 pages. How many pages did she read in all?

- You have circled 2 pages and 9 pages. This is the information you will use to find the answer.
- You have underlined “in all”. These words tell you to add.

$$\begin{array}{r} 2 \text{ pages} \\ + 9 \text{ pages} \\ \hline 11 \text{ pages} \end{array}$$

Jane read 11 pages in all.

**Exercise 15**

Solve each of the following word problems. Be sure to underline the words that tell you to add. Circle the information that is given. Have your instructor check your underlining and circling.

- Sven bought 7 cans of juice on Monday. He bought 9 cans of juice on Wednesday. How many cans of juice did he buy altogether?
- During the hockey game, Ewan took 8 shots from the blue line and 4 shots from in front of the net. How many shots did he take in all?
- Marlene noticed that there were 4 people in her math class. The next day 6 more people were in her math class. What is the total number of people in Marlene’s math class?
- The Blue Jays played two baseball games in a row. They got 10 runs in the first game and 7 runs in the second game. How many runs did they score altogether?
- Jaswinder had 9 apples in her grocery cart. She added 5 more different apples. How many apples did she have in total?

## Perimeter

Did you spot the fact that each answer in the word problems before had a **unit of measure**? A **unit of measure** just tells you what you measured. **Units of measure** can be pages, fish, cans, kilometres, meters, centimetres, litres, millilitres, grams, or kilograms. When you answer a word problem, you must include the **unit of measure** in your answer.

Try the following questions. Be sure to include the unit of measure in your answer.

**Perimeter** means **distance around**. To find the **perimeter** of a shape, find the lengths of the sides and add them together.

**Example: Rectangle**

To find the perimeter, add the lengths of the sides of the rectangle.

- Perimeter =  $3 + 2 + 3 + 2$
- Perimeter = 10 metres

#### Exercise 5

Find the perimeter of each figure. Be sure to include the units of measure in your answer. Check your work using the answer key at the end of the exercise.

- Find the perimeter of the swimming pool.

- b. Find the perimeter of the garden.

- c. Find the perimeter of the greenhouse.

## Topic C: Addition of Larger Numbers

Use these steps to complete each addition question.

1. Add the ones to the ones.
2. Add the tens to the tens.
3. Add the hundreds to the hundreds.

### Example A:

$$\begin{array}{r} 23 \\ +56 \\ \hline \end{array}$$

1. Add the ones to the ones. 3 ones + 6 ones = 9 ones. Write the answer in line with the ones in the equation.

$$\begin{array}{r} 23 \\ +56 \\ \hline 9 \end{array}$$

2. Add the tens. 2 tens + 5 tens = 7 tens

$$\begin{array}{r} 23 \\ +56 \\ \hline 79 \end{array}$$

The sum of  $23 + 56 = 79$

### Example B:

$$\begin{array}{r} 372 \\ +415 \\ \hline \end{array}$$

1. Add the ones. 2 ones + 5 ones = 7 ones

$$\begin{array}{r} 372 \\ +415 \\ \hline 7 \end{array}$$

2. Add the tens. 7 tens + 1 ten = 8 tens

$$\begin{array}{r} 372 \\ +415 \\ \hline 87 \end{array}$$

3. Add the hundreds. 3 hundreds + 4 hundreds = 7 hundreds

$$\begin{array}{r} 372 \\ +415 \\ \hline 787 \end{array}$$

The sum of  $372 + 415 = 787$

## Unit 3: Subtraction

---

## Topic A: Subtraction

**Subtraction** takes an amount **away** from another amount. The result of subtraction is called the **difference**.

The **minus sign**  $-$  means to subtract.

$$\begin{array}{ccccccccccc} \diamond & \diamond & \diamond & \diamond & \diamond & \diamond & \diamond & \diamond & \diamond & \diamond & \diamond \\ 9 & - & 3 & = & 6 \end{array}$$

says nine minus three equals six **or** nine take away three is six.

The **difference** between 9 and 3 is 6.

Subtraction is the opposite of addition.

**Look at the examples:**

$$5 + 4 = 9 \quad 9 - 4 = 5$$

$$4 + 5 = 9 \quad 9 - 5 = 4$$

$$\begin{array}{r} 8 \\ +3 \\ \hline 11 \end{array} \quad \begin{array}{r} 11 \\ -3 \\ \hline 8 \end{array}$$

$$\begin{array}{r} 3 \\ +8 \\ \hline 11 \end{array} \quad \begin{array}{r} 11 \\ -8 \\ \hline 3 \end{array}$$

**Subtraction facts** are a tool that you will use to do subtraction questions.

### Exercise 1

Check out your **subtraction facts** by doing the following exercises as quickly as you can. Use your addition facts to help find the subtraction facts. Check your work using the answer key at the end of the exercises. Then, make a list of any subtraction facts you do not know or which are slow for you and practice them.

Need some extra practice?

- Find a partner and play this card game.
- Using a regular deck of cards, a jack will be eleven, a queen will be twelve and a king will be thirteen.
- Shuffle the cards and deal them out. Keep your cards in a pile in front of you.

- Each player flips over a card.
- Take turns subtracting the numbers on the cards. If the person gets the right answer that person gets to keep the cards. If the person get the wrong answer the other player gets the cards.
- The person who collects all the cards is the winner.
- You could also set a time limit and the person with the most cards when time is up is the winner.

## Subtracting Across

So far you have only been subtracting numbers when they are **up and down** or **vertical**.

**Example:**

$$\begin{array}{r} 9 \\ -5 \\ \hline 4 \end{array}$$

Another way to subtract numbers is **across** or **horizontally**.

$$9 - 5 = 4$$

When you subtract numbers across, you work from left to right.

## Word Problems

Learning subtraction facts is very important because once you know them all they become a tool to use when solving problems.

Words such as:

- less than
- minus
- subtracted from
- how many more
- how much more, and
- difference

tell you to subtract the numbers.

Look for these words when reading word problems and underline them before trying to solve a problem. Circle the information that is given.

**Example:**

There were 14 nails in a box. Lu used 7 of them. How many nails were still in the box?

There were (14 nails) in a box. Lu (used 7) of them. How many nails were still in the box?

You have circled 14 nails and 7. This is the information you will use to find the answer.

You have underlined “how many”. These words tell you to subtract.

$$\begin{array}{r} 14 \text{ nails} \\ - 7 \text{ nails} \\ \hline 7 \text{ nails} \end{array}$$

**Exercise 12**

- Wolfgang walked 11 blocks. Ingrid walked 6 blocks. Wolfgang walked how much farther than Ingrid?
- Mika and her father went fishing. Mika caught 18 fish and her father caught 9 fish. How many more fish did Mika catch?
- Kuan-Lin was making moon cakes for the class party. She needed 15 cakes for the party. On Monday she had made 7 moon cakes. How many moon cakes did she still need to make?
- Malik counted 12 cars in the parking lot where he worked. One hour later, he counted only 4 cars. How many cars left?

## Topic B: Subtraction of Larger Numbers

You can find the difference between two large numbers using the basic subtraction facts you have been practicing. Always **take away** or subtract the **number after the minus sign**.

Use these steps to complete each subtraction question.

1. Subtract the ones from the ones.
2. Subtract the tens from the tens.
3. Subtract the hundreds from the hundreds.

### Example A:

$$\begin{array}{r} 57 \\ -26 \\ \hline \end{array}$$

1. Subtract the ones from the ones. 7 ones – 6 ones = 1 one. Write the answer in line with the ones in the question.

$$\begin{array}{r} 57 \\ -26 \\ \hline 1 \end{array}$$

2. Subtract the tens from the tens. 5 tens – 2 tens = 3 tens

$$\begin{array}{r} 57 \\ -26 \\ \hline 31 \end{array}$$

The **difference** between 57 and 26 is **31**.

### Example B:

$$\begin{array}{r} 628 \\ -524 \\ \hline \end{array}$$

1. Subtract the ones from the ones. 8 ones – 4 ones = 4 ones. Write the answer in line with the ones in the question.

$$\begin{array}{r} 628 \\ -524 \\ \hline 4 \end{array}$$

2. Subtract the tens. 2 tens – 2 tens = 0 tens.

$$\begin{array}{r} 628 \\ -524 \\ \hline 04 \end{array}$$

3. Subtract the hundreds. 6 hundreds – 5 hundreds = 1 hundred.

$$\begin{array}{r} 628 \\ -524 \\ \hline 104 \end{array}$$

Write the answer in line with the hundreds in the question. The **difference** between 628 and 524 is **104**.

CONGRATULATIONS!!

Now you have finished Unit 3.

TEST TIME!

Ask your instructor for the Practice Test for this unit.

Once you've done the Practice Test,

You need to do the Unit 3 Test.

Again, ask your instructor for this.

GOOD LUCK!

## Unit 4: Estimating, Time, and Shapes

---

## Topic A: Estimating

You use numbers in your everyday life. You often use **estimating** in your everyday life.

You go shopping and you only have twenty dollars, you may need to **estimate** how much your groceries are going to cost before you go to pay for them.

You commute by bus each day to work and it takes thirty-three minutes going to work and thirty-three minutes coming home at the end of the day. You would say that it takes you about one hour on the bus.

These are examples of **estimating**.

You have already learned about **rounding** numbers. You need to be able to round numbers in order to be able to **estimate**.

When you solve math problems, it is a good idea to **estimate** what the answer may be. **Estimating** the answer means finding an answer that is close to the real answer. **Estimating** helps you to see if the real answer is sensible. To **estimate** an answer, you need to round the numbers then add or subtract the rounded numbers. Remember to round to the nearest ten.

| Example                                              | Estimate                                                 |

There are 186 people living in my apartment building. If 103 are children, how many are adults?

$$\begin{array}{r} 186 \\ -103 \\ \hline \end{array}$$

Estimate:

## Topic B: Time

The ancient Babylonians used a number system based on 60. We still use their number system when we talk about time.

There are 60 minutes in an hour, and there are 60 seconds in a minute.

- 60 minutes = 1 hour
- 60 seconds = 1 minute

### Writing Time in Standard Format

Time is written in a standard format.

Hours: Minutes: Seconds

**Example:**

12 noon

would be written as 12:00:00

or 12:00 (without the seconds)

**Example:**

4 o'clock

would be written as 4:00:00

or 4:00 (without the seconds)

**Example:**

8 hours, 47 minutes, 3 seconds

would be written as 8:47:03

**Note:** When there is only one number, put in a zero to hold the tens place.

**Example:**

3 hours, 9 minutes, 3 seconds

would be written as 3:09:03

## Exercise 1

Write the following times in standard format. Check your work using the answer key at the end of the exercise.

**Example:**

2 hours, 7 minutes, 31 seconds. 2:07:31

- a. 3 hours, 56 minutes, 42 seconds
- b. 12 hours, 2 minutes, 29 seconds
- c. 1 hour, 23 minutes, 54 seconds
- d. 6 hours, 7 minutes, 39 seconds
- e. 11 hours, 41 minutes
- f. 7 hours, 14 minutes, 59 seconds
- g. 21 hours, 36 minutes

**A.M. and P.M.**

You need to go to the dentist at 9:00 a.m. This is in the morning because of the **a.m.** The abbreviation **a.m.** means **ante meridiem** or **before noon**. We use a.m. for any times between 12 midnight and 12 noon.

You are meeting friends for dinner at 6:00 p.m. This is at night because of the **p.m.** The abbreviation **p.m.** means **post meridiem** or **after noon**. We use p.m. for any times between 12 noon and 12 midnight.

**Example:**

You catch the bus at 7 o'clock in the morning.

The time would be written as 7:00 a.m.

**Example:**

You are meeting friends to go fishing at 6:30 at night.

The time would be written as 6:30 p.m.

### Exercise 2

Write the following times using a.m. or p.m. Check your work using the answer key at the end of the exercise.

**Example:**

The sun rises at 7:07 in the morning.

7:07 a.m.

- a. Your shift at work starts at 8:30 in the morning.

| b. 1:00 p.m. | d. 6:15 a.m. |              |

## Rounding Time

When you round time, if the minutes are more than thirty, you round up to the next number of hours. If the minutes are less than thirty, you remain at the same number of hours.

**Example:**

If it took 45 minutes to drive to school, you would round that to one hour because 45 minutes is greater than 30 minutes.

**Example:**

If it took one hour and 15 minutes to get to school by bus, you would round that to one hour because 15 minutes is less than 30 minutes.

**Example:**

If it took 8 hours and 37 minutes to complete the painting job, you would round that to 9 hours because 37 minutes is greater than 30 minutes.

## Exercise 3

Round the following times to the nearest hour. Check your work using the answer key at the end of the exercise.

**Example:**

The movie lasted 3 hours and 13 minutes.

3 hours.
